

Extended Phase 1 Habitat Survey Bicester, Oxfordshire, UK

**Bicester Heritage Ltd.
November 2013**

- Ecological due diligence
- Sustainable development
- Site survey
- Protected species

This project was undertaken to help inform planning considerations for a change of use of part of the land at RAF Bicester,

An extended survey identified that the site is important for bats, breeding birds and reptiles.

The site is in a parkland setting with mown grass, mature trees and various storage buildings. Other habitat types including hedgerows, scrub and the grassland of the airfield itself which is still active and used mostly by a local gliding club.

Lepus Consulting worked closely with the client and evaluated that the proposals for the change of use for the building in question will not have an adverse affect on the nature conservation interests at the rest of the site.
